

Oral potassium for adults

Medicines
safety is
everyone's role

- Patients requiring more than 12mmol or more of potassium should be prescribed Sando-K[®](potassium chloride)
- Risk of a **L**ook – **A**like – **S**ound – **A**like error with **PHOSPHATE SANDOZ[™]**
- Doses are to be rounded to nearest whole 12 mmol tablet
- Sando-K[®] must be dissolved in 50 – 70mL of water and can be taken with food or mixed with squash to mask taste. Do not mix with extremes of pH i.e. fruit juice, yoghurt or milk
- No more than 2 to 3 days may be taken without repeat blood tests and a prescriber review
